

Activity 11 acceptance checklist

REST JSON and configuration automation

TGS-2023037854 | v7.0 | 80 minutes

Learner: _____ Date: _____

- ☐ 1. I built the compulsory simulator topology using the exact models, named ports and endpoint addresses.
- ☐ 2. I installed every peer baseline configuration and saved the CONFIGURED healthy baseline.
- ☐ 3. I observed the baseline traffic matrix on the simulator and captured actual show output.
- ☐ 4. I introduced the specified controlled fault and proved the affected and unaffected flows.
- ☐ 5. I applied the narrow repair and repeated the allowed, denied and failure/recovery tests where specified.
- ☐ 6. I rehearsed rollback from the saved healthy baseline and observed recovered traffic.
- ☐ 7. I calculated the relevant addressing, cost, tuple or policy results before editing fixtures.
- ☐ 8. I captured the original faulty fixture FAIL controls and explained their cause.
- ☐ 9. The corrected JSON fixture passes every contract; self-test rejects faulty and corrupted controls.
- ☐ 10. I distinguished fixture calculations from actual simulator results and recorded unsupported advanced features honestly.
- ☐ 11. I submitted the verified .pkt file, actual show/traffic evidence, corrected case.json and diagnosis.

Evidence note

The core simulator construction is compulsory. Separately labelled unsupported extensions may be evidence-only. Fixture PASS does not prove live forwarding, authentication or deployment.

Trainer / peer review: _____

Actual simulator acceptance tests

PC1 ping 10.10.10.1 succeeds throughout. R1 show interfaces GigabitEthernet0/0 shows Description: Users after repair. Compare saved configs: only the interface description changes. Then run the independent JSON checker, deliberately change enabled from boolean true to string "true" and observe schema rejection; restore boolean. Record an empty difference plan when actual fixture equals desired state. PT2911 does not expose a genuine RESTCONF API; CLI observations alone do not prove API operation.

☐ Healthy baseline observed ☐ Controlled fault observed ☐ Repair verified

Observed outcomes / differences: _____

Fixture acceptance controls

- ☐ REST success and JSON media
- ☐ JSON interface schema
- ☐ desired state idempotent
- ☐ read request secure
- ☐ bounded agentic proposal
